

TACTICAL COMMUNICATIONS

HW SYSTEMS INTEGRATOR ENGINEER

Ref. No. UNI/DEF/SIE

Location: Koropi

Description:

The position requires participating in the complete hardware development cycle of complex state-of-the-art tactical wireless and wired communication systems covering the areas of audio, video and data processing/transmission. The successful candidate will be involved in the implementation of the hardware system architecture (using off-the-shelf and/or in-house developed units) and will participate in the development, integration, verification, qualification and documentation of the system.

Required Skills:

- University degree in Electrical/Electronics Engineering, with a focus on electronics
- Some proven experience in digital and/or analog systems design, integration and testing
- Perfect knowledge of using Oscilloscopes, Logic Analyzers and Power Supplies
- Goal oriented, organized, and team worker with good communication skills
- Fluent use of English language

Desired Skills:

- Good knowledge of using Network Analyzers, Spectrum Analyzers, and RF Power Meters
- Familiarity with RF systems engineering
- Familiarity with PCB CAD processes
- Post-graduate studies on a relevant technical area

If you are interested in the above mentioned position please send your CV to hr@intracomdefense.com quoting the respective Ref. No.

All applications will be treated with strict confidentiality.
